

bluesky MailSafe protects your email from vicious SPAM and Malware so you can focus on what really matters - your business.

The **bluesky MailSafe** solution provides your business with industry-leading and specialised SMTP email security that is managed by highly skilled professionals. Addressing today's threats, MailSafe provides layered protection in front of your mail servers (irrespective of location), identifying and removing viruses, spyware and SPAM before they begin to jeopardise the integrity of your system. This in turn protects you against identity theft and the loss of business assets.

In the past, many organisations have employed point product security technologies to manage each threat. However, today this is considered ineffective against newer blended attacks that comprise multi vectors.

Benefits of the bluesky Mailsafe program

-  Increased employee productivity and protection
-  Improved integrity of business communications
-  Freed up IT resources and reduced costs associated with threat management
-  Improved availability
-  Simple to use
-  Predictable costs
