

bluesky ON provides the best possible backup and disaster recovery scheme for your business' data.

In today's technological world, electronic information has become a crucial aspect of a business' livelihood. However, many companies still use unreliable and outdated Mag-Tape technology. If you doubt that your current backup is secure from the latest hacker attacks or employee deletion error, or are unsure if a restoration will return your company to full operational efficiency in a prompt manner, the **bluesky ON** solution is for you.

bluesky ON is a well defined and managed backup solution providing incremental or real time read/write and recovery services.

Built by an experienced pool of engineers, **bluesky ON** gives you the ability to fully recover lost data in less than an hour from a full system failure within the working environment.

Coupled with additional **Technology By Design** services, **bluesky ON** can enable your company to have a fully restored and accessible environment delivered to local systems within hours.

Benefits of the bluesky ON program

Reduce Costs

Receive all the benefits of the **bluesky ON** backup service for a low and predictable monthly fee. **bluesky ON** allows your company to introduce a business continuity plan at no extra cost.

Increase Security

Protect all data within your business environment; both locally and at our data centre, for security and peace of mind.

Increase Productivity

Remove human intervention from your backup cycle with our all-in-one automated backup solution.

Increase Performance

bluesky ON introduces a predictable output from backup that is managed 24 hours a day, every single day of the year with full reporting capability. In addition, rapid retrieval of mail services is guaranteed.

Increase Availability

When compared to:

- Dated tape-based systems
- Systems or services that only provide "critical data" backup
